

GEF CSO Network
Statement on LDCF/SCCF Resource Mobilization
Oct 10, 2025

The GEF CSO Network welcomes the presentation by the Secretariat.

The UNFCCC last year agreed to triple the level of climate finance flow from developed countries to developing countries to a level of \$300 billion per year by 2035 – while also recognising the total financing needed for developing countries may be \$1.3 trillion/year. However, the funding flow through LDCF and SCCF is currently inadequate and not being scaled-up.

We strongly encourage enhanced multi-year pledging mechanisms or a formal 4-year replenishment process like the GEF Trust Fund.

In order to enhance the fund level - we support the proposals to expand the contributor base and enhance resource mobilisation.
